COLOSSEUM · CRYPTO WORLD'S FAIR 2026

Afterbell

Cover for tokenized stocks at the market open.

afterbell-nine.vercel.app

THE PROBLEM

The token never closes. The stock does.

Every night and every weekend, the price that matters is set by one print at 9:30 ET.

16:00 ET

The stock closes.

Overnight, weekend

The token keeps trading, with no stock price behind it.

9:30 ET

The first print reprices every token and every loan at once.

$3.34B

tokenized stocks on-chain, +16.89% in 30 days

4.35M

holders, +23.10% in 30 days

$10.29B

moved on-chain in the last 30 days

Source: rwa.xyz, tokenized stocks dashboard, read 12 Oct 2026.

WHO GETS HURT FIRST

Borrowers get liquidated on that print.

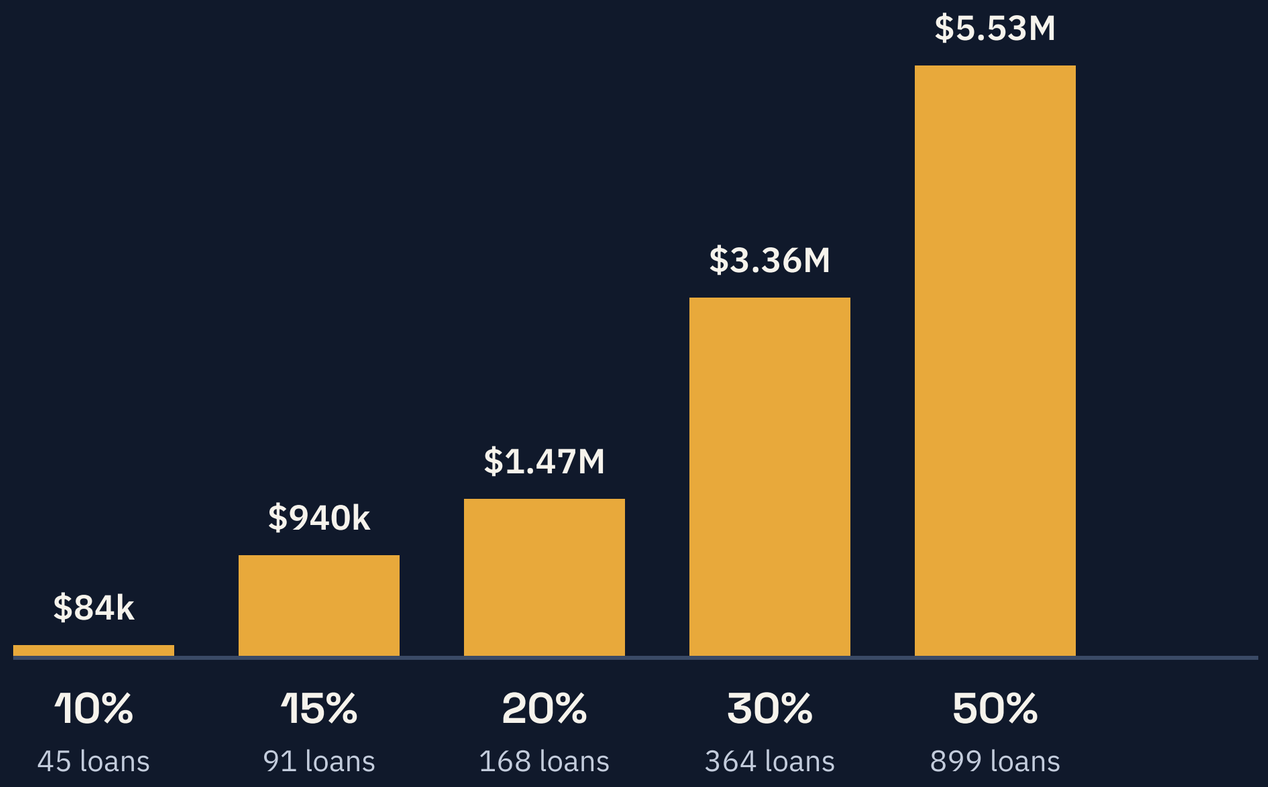

Kamino lends against xStocks on Solana.

1,609 loans

$6.58M borrowed against them

> Its 8 biggest stocks ($25M) on their worst recorded opening, at today's size: **−$1.09M**.
>
> Afterbell's 2–10% cover would have paid **$666k**.

Debt that can be liquidated if stocks open down…

Kamino's xStocks market, read on-chain by Afterbell: loans and debt on 30 Sep 2026, collateral and worst openings on 12 Oct 2026.

HOW IT WORKS

Buy cover tonight. The opening print pays it.

1. Pick a stock and a band below the close, say 2% to 10%.
2. Pay one fixed price, set from that stock's own past openings.
3. The first print after the open settles it: Pyth on Solana, Chainlink on Robinhood Chain.
4. It pays whoever holds the position. Nothing to claim.

EXAMPLE

TSLA closes at $400. You cover 10 shares from $392 down to $360.

Opens at $395	**$0**
Opens at $376	**$160**
Opens at $340	**$320, the most**

The price is fixed up front. The most you can lose is what you paid.

The example is an illustration. On the board this weekend: TSLA 2–10% cover at $0.74 a share, with TSLA at $382.76.

THE ALTERNATIVES

Today a holder has three bad choices.

Sell before the close	Gives up the position and any gain overnight. Buying back costs fees and slippage.
Short a perp	Needs margin, pays funding, can be liquidated itself, and has to be watched all night.
Do nothing	Takes the whole gap.
Afterbell	One fixed price, paid once. Keep the position and any gain. It pays only if the open gaps down.

Others exploring the same gap as of 27 Sep: AfterHours, Recess, Gapguard. We found no on-chain venue selling cover on tokenized stocks.

Competitor search: hackathon projects and public products, 27 Sep 2026.

THE PRODUCT

Live today, with test money.

34 stocks, 2 chains

Solana, settled by Pyth. Robinhood Chain, settled by Chainlink.

Priced per stock

From each stock's own past openings, plus 15%, never under 0.5% of the most it pays.

A pool anyone can join

Underwriters deposit and earn the premiums. Each position is an NFT paid to its holder.

Hedged

TSLA's risk is offset on Hyperliquid's testnet, rebalanced every 5 minutes.

Built for lenders

A Kamino loan checker, auto-cover sized to the loan, and a gap report for any book.

Easy to try

A one-click test wallet at /try, and an MCP server so agents can buy cover.

Solana devnet and Robinhood Chain mainnet, paid in TestUSD. afterbell-nine.vercel.app

PROOF

It settles on the real opening print.

9

openings settled on-chain, on both chains

15

positions sold, each one an NFT

159

hedge trades on Hyperliquid's testnet

19.5 bps

Chainlink at the open vs Pyth's open, median of 46 openings

NOT YET SHOWN

Every buyer so far is one of our own wallets, and the hedge fills against our own quotes, since testnet has no other TSLA liquidity. Public testing opened 11 Oct.

Every number links to its transaction at afterbell-nine.vercel.app/verify, read 12 Oct 2026.

THE BUSINESS

We earn a fee on every premium.

Where $1 of premium went, replayed on 1,984 openings of 34 stocks

- **46¢** paid to holders on bad openings
- **10¢** our fee
- **44¢** kept by the underwriters, before hedging and keeper tips

The price

Expected payout plus 15%, never under 0.5% of the most it pays.

About 0.3% a night

The median cost of 2–10% cover across 34 stocks, as a share of the position.

Every trading day

Cover lasts one opening, so a holder who wants it buys again: 252 times a year.

[The 10% fee is a proposal, not yet in the contracts.] Backtest with no look-ahead: afterbell-nine.vercel.app/backtest. Board prices read 12 Oct 2026.

THE PATH TO $10M A YEAR

$10M a year means covering 4% of today’s market every night.

TODAY

$0

Test money on two chains.

STEP ONE

$1M a year

The same as covering Kamino's 8 biggest xStocks ($25M) at 2–10% every opening: $46.8k a night × 252 × 10%.

THE GOAL

$10M a year

$100M of premiums: about $130M covered each night at 0.305%. That's 3.9% of the $3.34B on-chain today, a market that grew 17% in the last 30 days.

Arithmetic at today's prices and a 10% fee, not a forecast. 252 trading days a year. Sources: Kamino gap report and Afterbell board, 12 Oct 2026; rwa.xyz, 12 Oct 2026.

GO TO MARKET

Start where it hurts most: loans.

1

Kamino borrowers

Visible on-chain, near the line. Auto-cover sized to each loan.

2

xStocks holders

Cover from a Solana wallet in one click, through the app and Blinks.

3

Robinhood Chain

The same cover for its stock tokens, settled by Chainlink.

4

Protocols and agents

Vaults and lenders buy for their users through the API, the gap report and MCP.

Why lenders first: the risk is visible in every loan, and a borrower near the line knows exactly what one bad opening costs.

The Kamino loan checker, auto-cover and gap report are live at afterbell-nine.vercel.app/kamino and /gap.

RISKS

What could go wrong, and what we do.

A huge gap	A night can lock at most half the pool, and a fifth on one stock. The hedge and the price floor add a margin on top.
A bad oracle	A price ten times off is refused. If nothing can settle within a day, the series voids and every premium is refunded.
Regulation	Cover on stocks can count as a derivative or as insurance. We get legal advice for each market before real money.
Nobody buys	The question we're testing now. Every tester gets asked: would you pay for this with real money?

Risk limits, voids and refunds are in both vaults and covered by fuzz and invariant tests.

ROADMAP

From test money to real cover.

NOW · OCT 2026

Live on test money

Public testing on two chains. A mainnet waitlist anyone can count.

[NEXT 3 MONTHS]

Mainnet

An audit, legal review, capped USDC pools, Kamino auto-cover.

[12 MONTHS]

$1M a year

One lending market's book covered every opening, and holders in their wallets.

[36 MONTHS]

$10M a year

Every major tokenized stock, on every chain they trade, bought by people, platforms and agents.

Dates in brackets are goals for the team to set, not commitments.

TEAM AND THE ASK

Help us take cover to mainnet.

THE TEAM

Samuel Aleonomoh

Founder

WHAT WE NEED

1. An audit of both vaults
2. First underwriting capital for the mainnet pool
3. One lending market to offer cover to its borrowers
